

Diagnosics

CCI provides an extensive and comprehensive diagnostics service for patients with a suspect immunodeficiency in addition to a thorough medical examination by its specialists. Our diagnostics services include extensive immunophenotyping, in vitro functionality tests of cells, genetic and histopathological analyses. In addition to sample preparation and analysis, CCI also helps with the interpretation of the results in association with the clinical picture and provides recommendations on follow-up procedures.

Diagnosics services

If you are looking for a specific test please check the list of the range of diagnostic analyses available. Costs and the availability of the individual services are also indicated.

[Immunodiagnosics](#) Immunophenotyping, in vitro functionality tests of cells

[Genetic Diagnosics](#) Clarification of genetic mutations by genetic analysis and DNA sequencing
