

## Research group "Immunobiology" (Dr. Kristina Beck)

Kristina Beck Juniorgroup Leader

1996-98 Studies of Chemistry, Johannes Gutenberg Universität, Mainz

1998-01 Studies of Chemistry, Major: Biochemistry, Westfälische-Wilhelms Universität, Münster

2001-04 PhD-Scholarship "NRW Graduate School of Chemistry"; Institute for Biochemistry, WWU Münster

2005-10 Post Doc, University of California in San Diego, USA

Since 2010 Juniorgroup Leader at the Centre of Chronic Immunodeficiency

The research group Immunobiology is interested in understanding the transcriptional regulation of T cell differentiation pathways during an immune response. Therefore we study the roles of a class of transcriptional regulators called the Id proteins as well as their targeted transcription factors, called E proteins during T cell differentiation processes in the mouse model. The integration of the research group within the CCI enables us to think beyond the model systems and transfer the obtained results into the clinic.xxx
