

CCI Medical Services

CCI provides clinical and laboratory services to paediatric and adult patients in the areas of infectious diseases, immunology, haematology and stem cell transplantation.

The following patients are treated in CCI:

- Patients with Inborn defects of the immune system
- Patients who are infected with HIV
- Patients who have recurrent unexplained infections
- Patients with certain "indicator" infections or signs of immune dysregulation and where an immunodeficiency is suspected.

We run outpatient clinics for adult and paediatric patients and we have an interdisciplinary CCI conference for the discussion of complex cases.

- [Paediatric Outpatient Clinic](#)
- [Adult Outpatient Clinic](#)
- [Centre for HIV](#)

In addition, CCI provides a service in the care and treatment of patients referred from other departments who have secondary immunodeficiency caused by infections, a transplantation, or essential immunosuppressive treatments. The [CCI conference](#) is also available for the multi-disciplinary discussion of these patients.
