

Courses for Investigators

Controlled clinical trials are the decisive basis of rational diagnostics and therapy in nearly all medical fields and not only a fundamental component for the development and approval of medicines and medicinal products. The demands on the quality of the conduct of clinical trials are increasing. With regard to the job of investigator certain standards of quality are also demanded by law.

The aim of this course is to impart basic knowledge on ethical, regulatory and methodological aspects in the conducting of clinical trials, as well as practically relevant aspects for the planning and organisation of a clinical trial.

The course also provides a good opportunity to exchange experiences with colleagues.
