

RADIOMICS NEWS

the latest radiomics news, views and announcements

Welcome to the network

Dear SPP-colleagues,

Welcome to the spp-network and to our first newsletter. We would like to keep you up to date with the latest research highlights and developments within Radiomics: next generation of biomedical imaging. We look forward to your comments and suggestions. In today's edition we report on the latest meetings, and announce interesting calls and events. We hope you enjoy reading this issue.

Your coordination team

Kick-off-Meeting 2019

The Priority Program (SPP2177) „Radiomics- Next Generation of Biomedical Imaging”, coordinated by Prof. Dr. Fabian Bamberg, had its kick-off-meeting on 16. & 17. December 2019 in Freiburg with more than 60 participants.

The kick-off event officially initiated the program and served as a first forum to enhance collaboration and synergies between the 17 funded projects in the field of Artificial Intelligence, Deep-Learning and Radiomics in Biomedical Imaging. All projects represented a spectrum of translational research in this emerging and highly relevant research area. The framework of the SPP-coordination comprises a number of networking opportunities, workshops and gender equality measures also to support young researchers to foster the science along the way. The program committee and project office look forward to the next three years of top-level research and to an exciting time together.

The first workshop successfully held in Freiburg

On 13. February 2020 the first workshop “medical informatics initiative” was held with more than 30 participants.

Given the clearly indicated need at the Kick-off symposium, the workshop was organized by the team of the coordination office at the medical center of Freiburg in collaboration with the initiators Prof. Dr. Jürgen Hesser, PD Dr. Klaus Maier-Hein and Prof. Dr. Heinz-Peter Schlemmer. Main topics that were covered include general opportunities and challenges in Artificial Intelligence / Radiomics in imaging, the envisioned interaction in a joint-imaging-platform (i.e. DKTK or NORA), and synergies with the medical informatics initiative as a cross-project communication area.

Several SPP project members joined the very fruitful discussions in Freiburg and it became evident that there is the strong need and high potential of joining efforts in order to advance the particular projects but also the entire field in biomedical translational imaging research.

Important announcements

Events 2020

3. MIRACUM Symposium
26. - 27. March 2020
University Medical Center -
University of Freiburg

26th & 27th MARCH 2020

3. MIRACUM Symposium

Medical Center – University of Freiburg
www.miracum.org/events/symposium-2020/
*Registration: You can register here until
20th March!*

01 Oktober 2020

Workshop “Arroganz training® für weibliche Führungskräfte”

Dr. Peter Modler in Freiburg
Further information coming soon!
Registration Note: only for female
members!

Calls 2020

Shortly you will receive via E-Mail further information to our upcoming calls:

- Home office working places
- Student assistant (HiWi)
